

Computer Science An Overview

13th Edition, Global Edition

Chapter 7 Software Engineering

Chapter 7: Software Engineering

- 7.1 The Software Engineering Discipline
- 7.2 The Software Life Cycle
- 7.3 Software Engineering Methodologies
- 7.4 Modularity
- 7.5 Tools of the Trade
- 7.6 Quality Assurance
- 7.7 Documentation
- 7.8 The Human-Machine Interface
- 7.9 Software Ownership and Liability

7.1 The Software Engineering Discipline

- Distinct from other engineering fields
 - Lack of prefabricated components
 - Lack of metrics
- Practitioners versus Theoreticians
- Professional Organizations: ACM, IEEE, etc.
 - Codes of professional ethics
 - Standards

Computer Aided Software Engineering (CASE) tools

- Project planning
- Project management
- Documentation
- Prototyping and simulation
- Interface design
- Programming

7.2 The Software Life Cycle

- Effort put into the development of software can make a tremendous difference when modifications are required
- Unlike manufactured products, maintenance consists of correcting and updating
- Ongoing maintenance requires that someone can understand the program and its documentation

Figure 7.1 The software life cycle

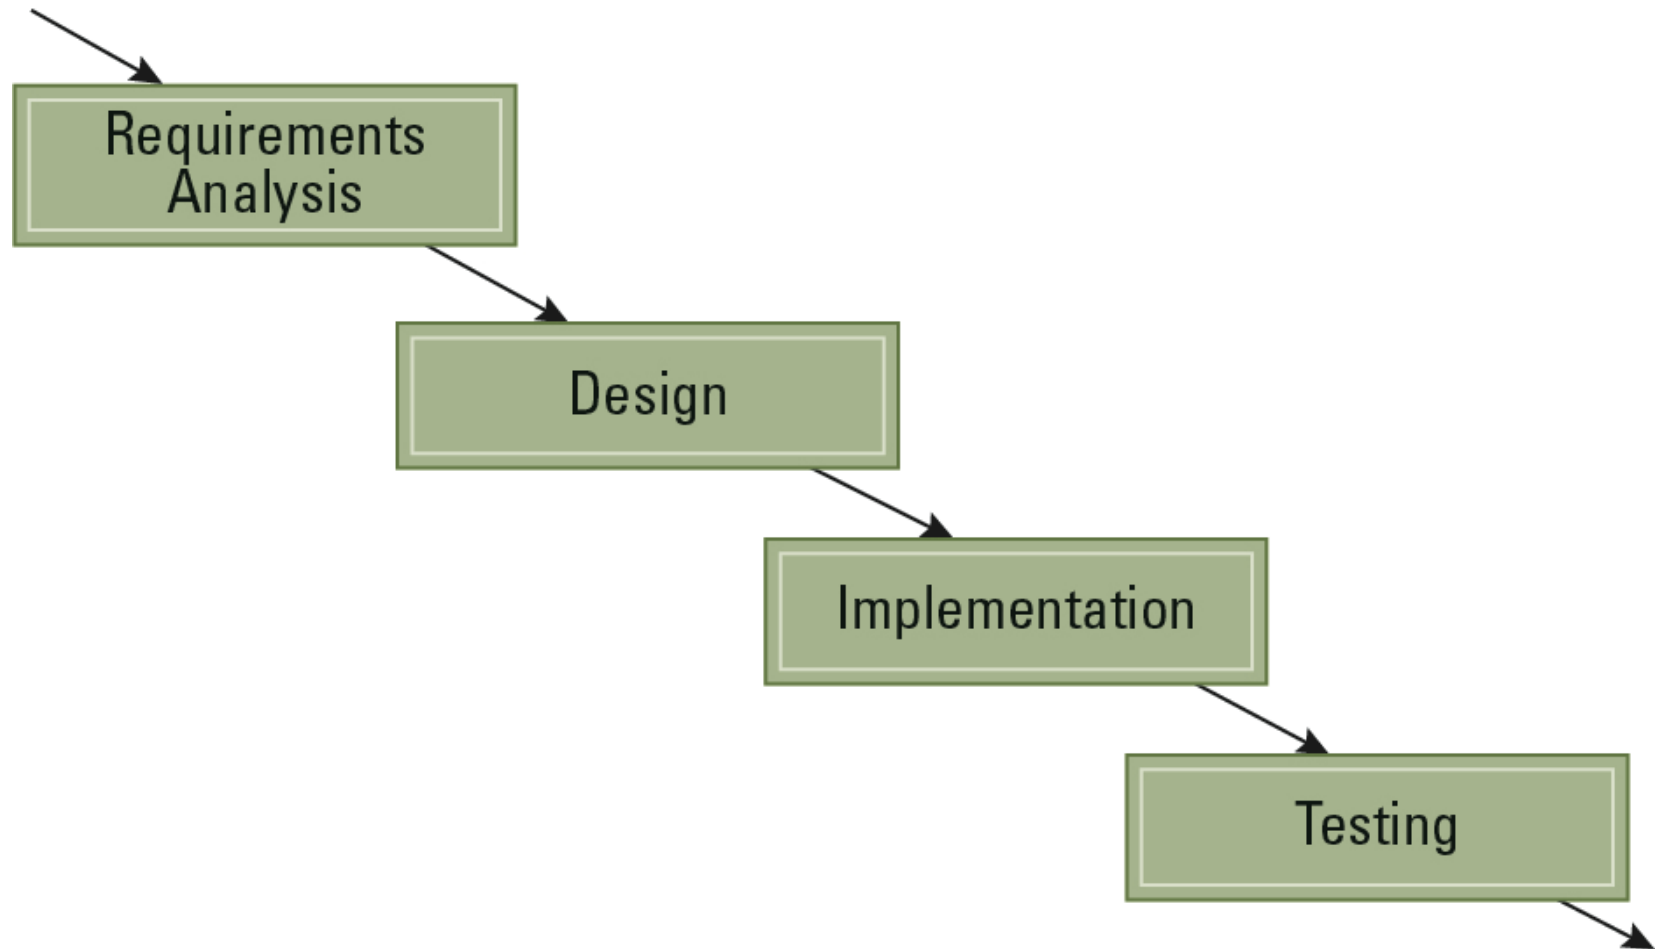

Figure 7.2 The development phase of the software life cycle

Requirement Analysis Stage

- Requirements
 - Application oriented
- Specifications
 - Technically oriented
- Software requirements document

Design Stage

- Methodologies and tools (discussed later)
- Human interface (psychology and ergonomics)

Implementation Stage

- Create system from design
 - Write programs
 - Create data files
 - Develop databases
- Role of “software analyst” versus “programmer”

Testing Stage

- Validation testing
 - Confirm that system meets specifications
- Defect testing
 - Find bugs

7.3 Software Engineering Methodologies

- Waterfall Model
- Incremental Model
- Prototyping (Evolutionary vs. Throwaway)
- Open-source Development
- Agile Methods

7.4 Modularity

- Functions □ Imperative paradigm
 - Structure charts
- Objects □ Object-oriented paradigm
 - Collaboration diagrams
- Components □ Component architecture

Figure 7.3 A simple structure chart

Figure 7.4 The structure of PlayerClass and its instances

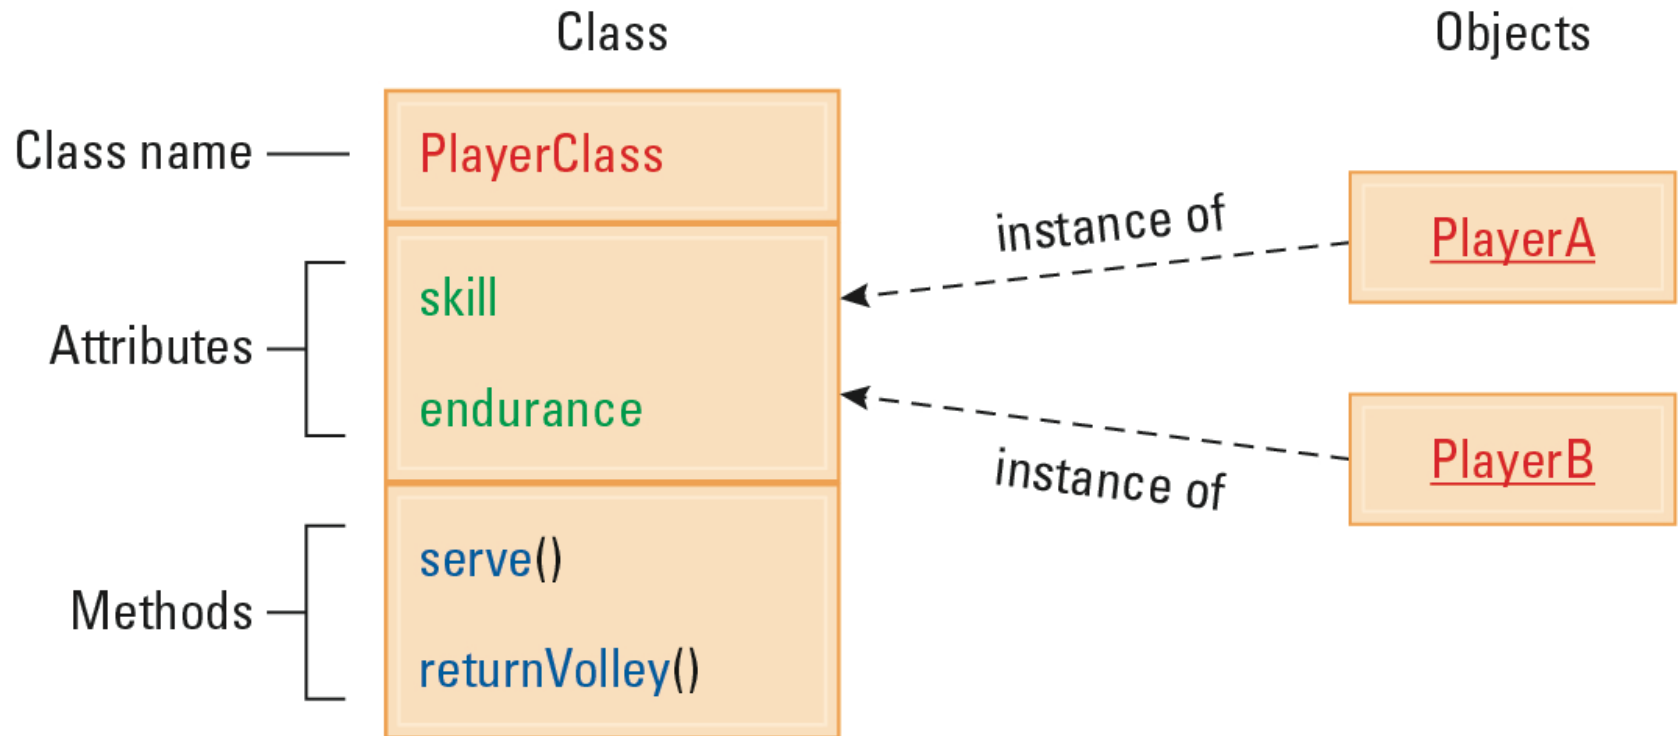

Figure 7.5 The interaction between objects resulting from PlayerA's serve

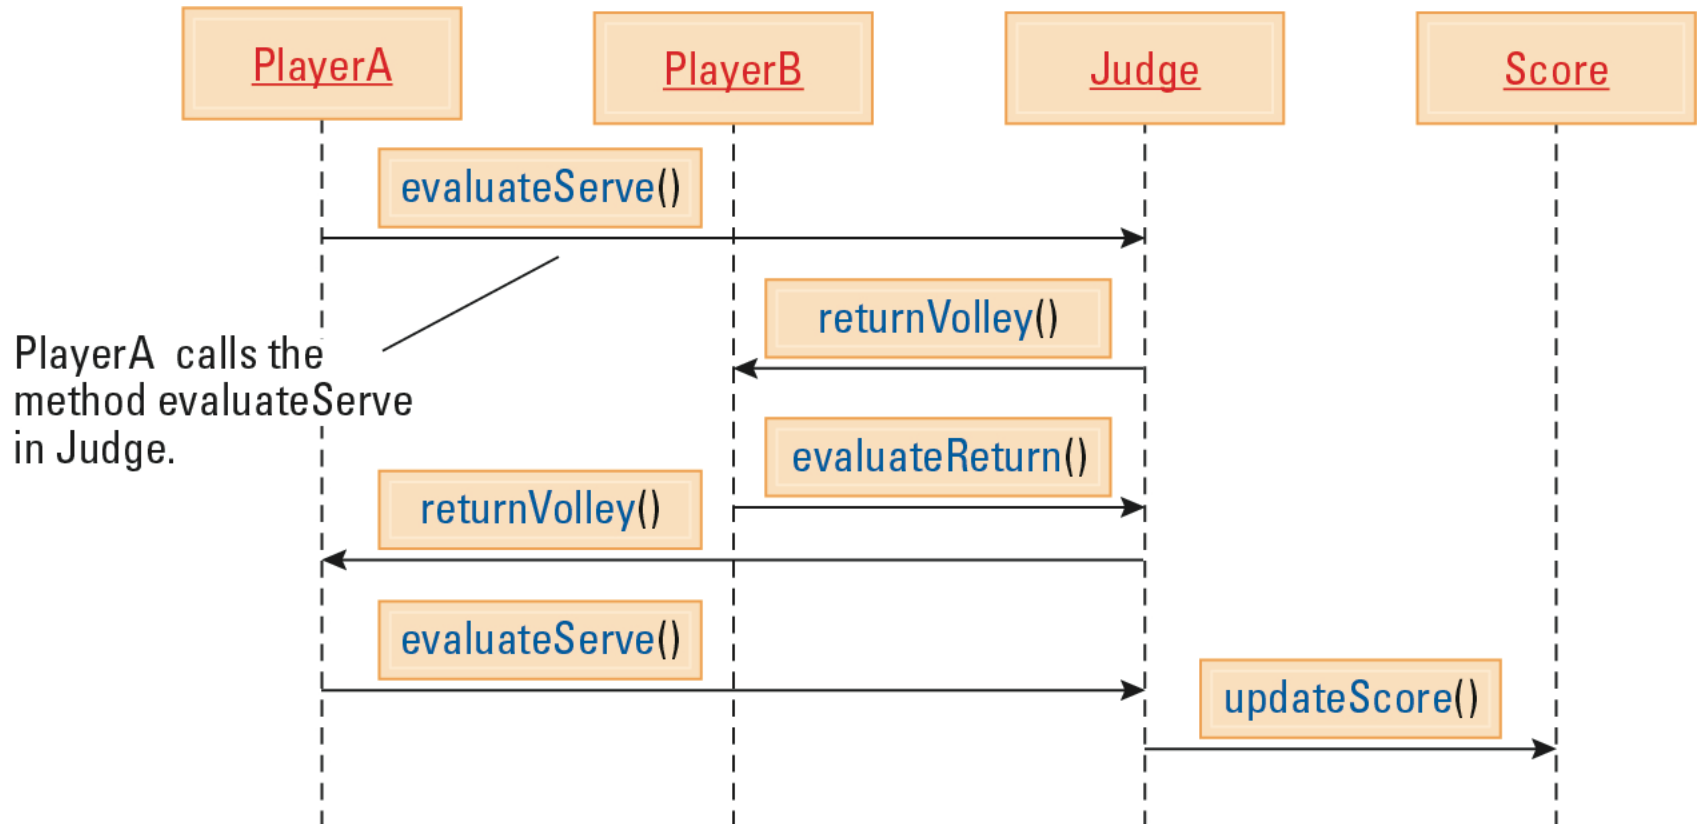

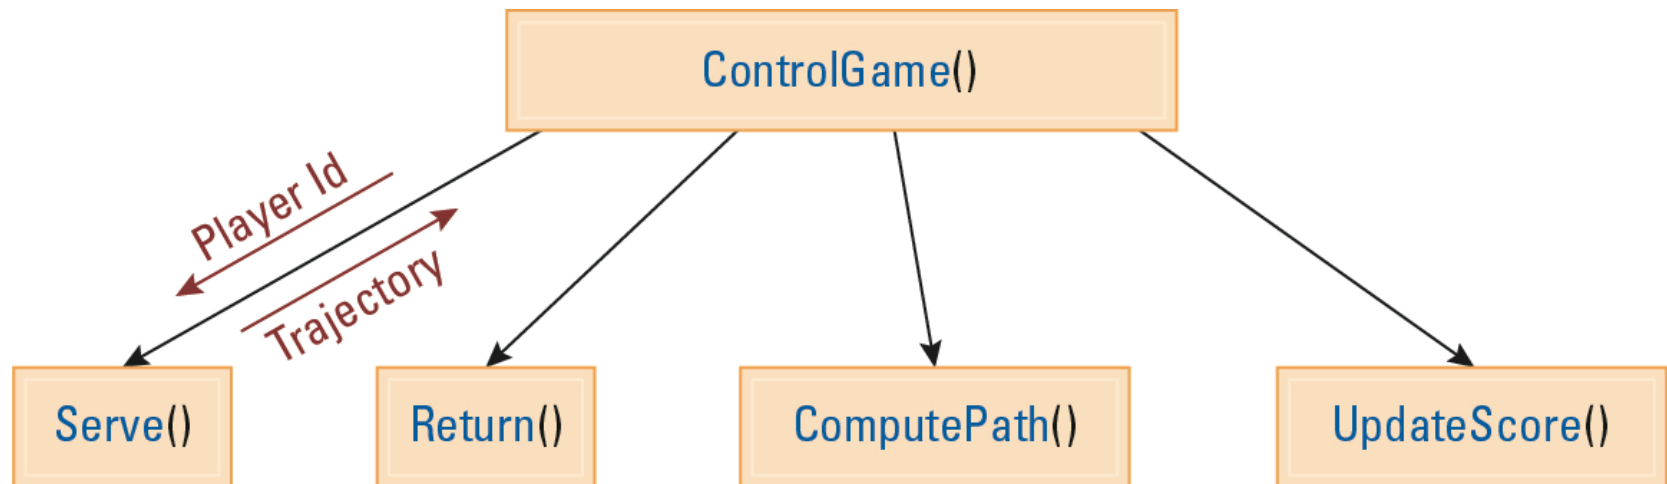

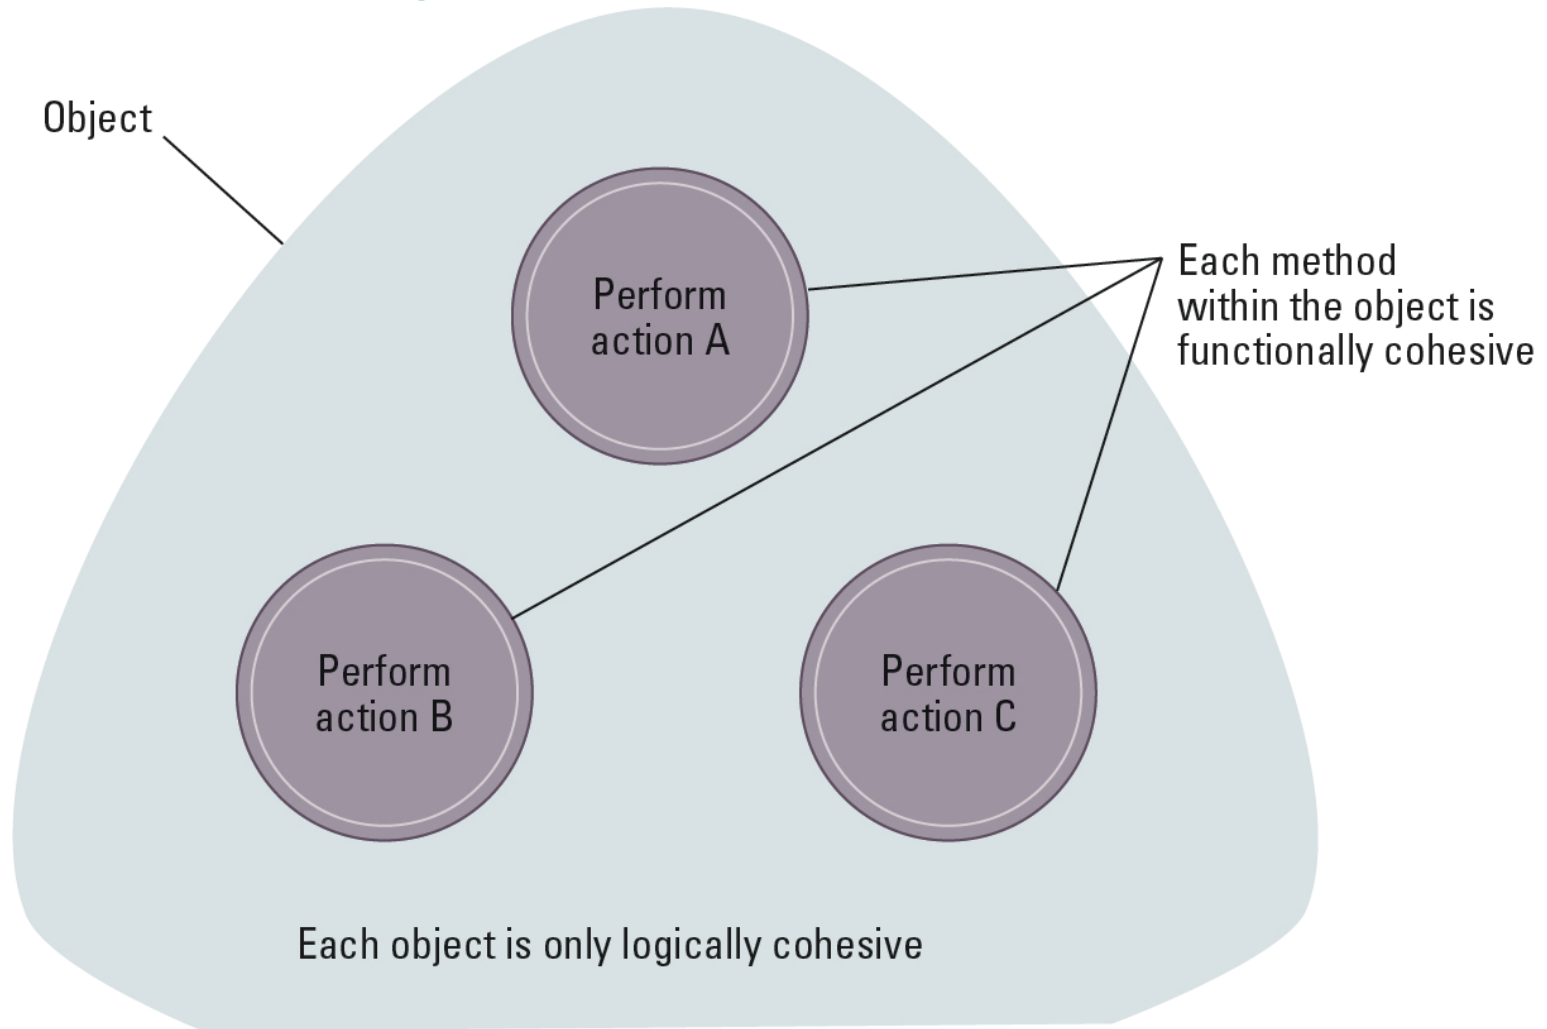

Figure 7.6 A structure chart including data coupling

Coupling versus Cohesion

- Coupling
 - Control coupling
 - Data coupling
- Cohesion
 - Logical cohesion
 - Functional cohesion

Figure 7.7 Logical and functional cohesion within an object

7.5 Tools of the Trade

- Data Flow Diagram
- Entity-Relationship Diagram
 - One-to-one relation
 - One-to-many relation
 - Many-to-many relation
- Data Dictionary

Figure 7.8 A simple dataflow diagram

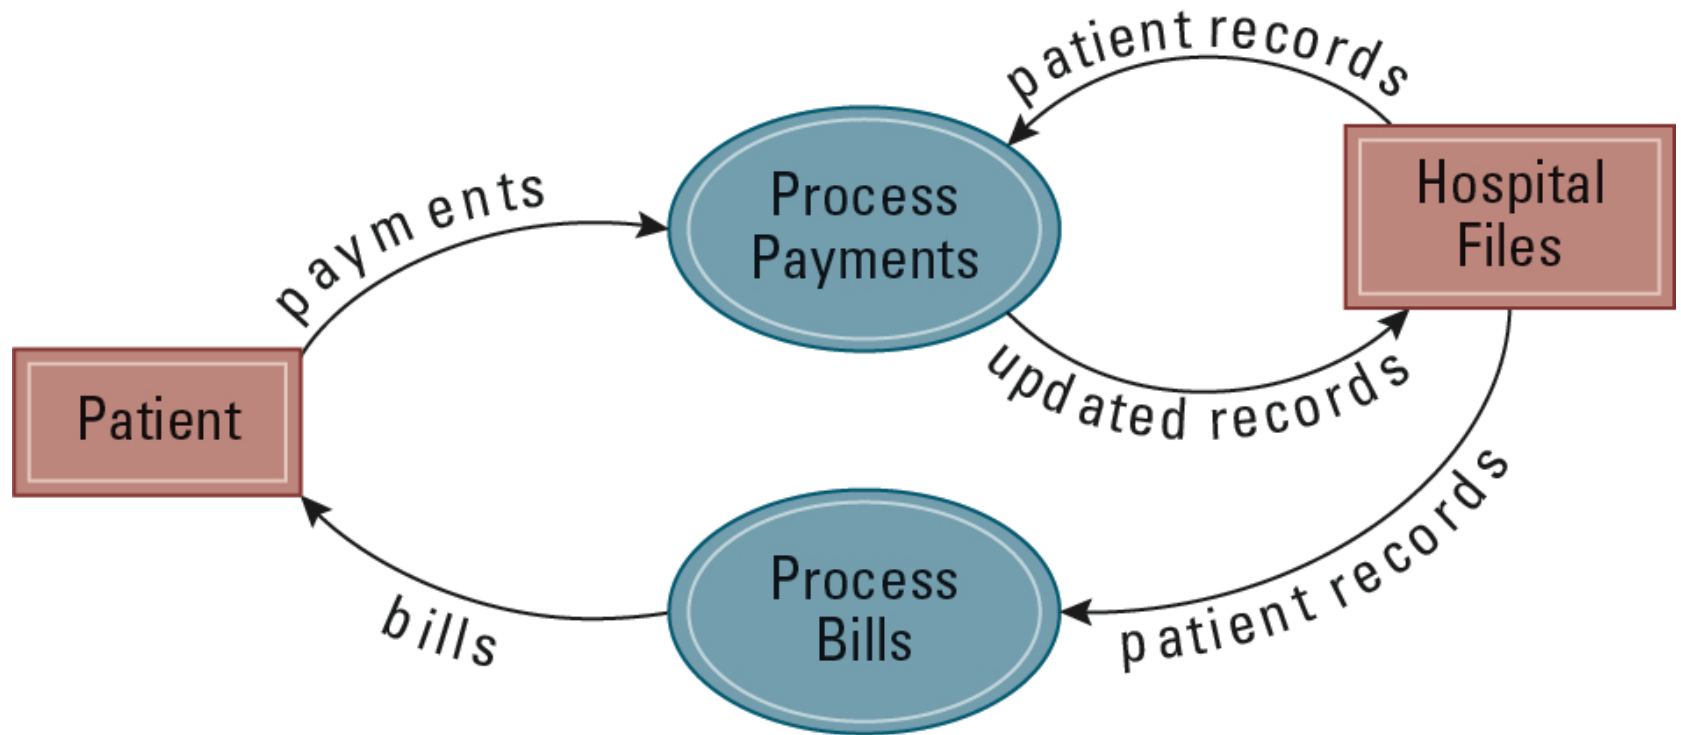

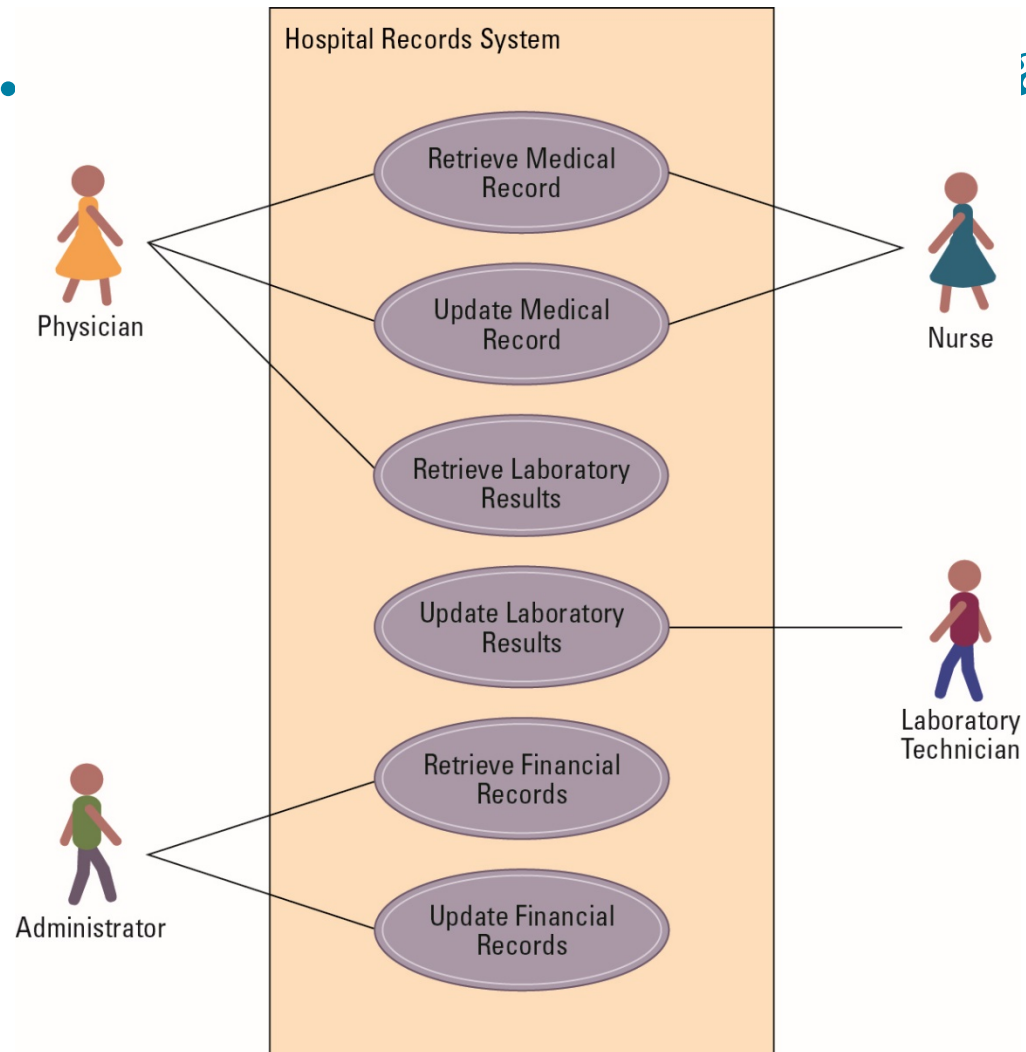

Figure 7.

am

Figure 7.10 A simple class diagram

Unified Modeling Language

- Use Case Diagram
 - Use cases
 - Actors
- Class Diagram

Figure 7.11 One-to-one, one-to-many, and many-to-many relationships between entities of types X and Y

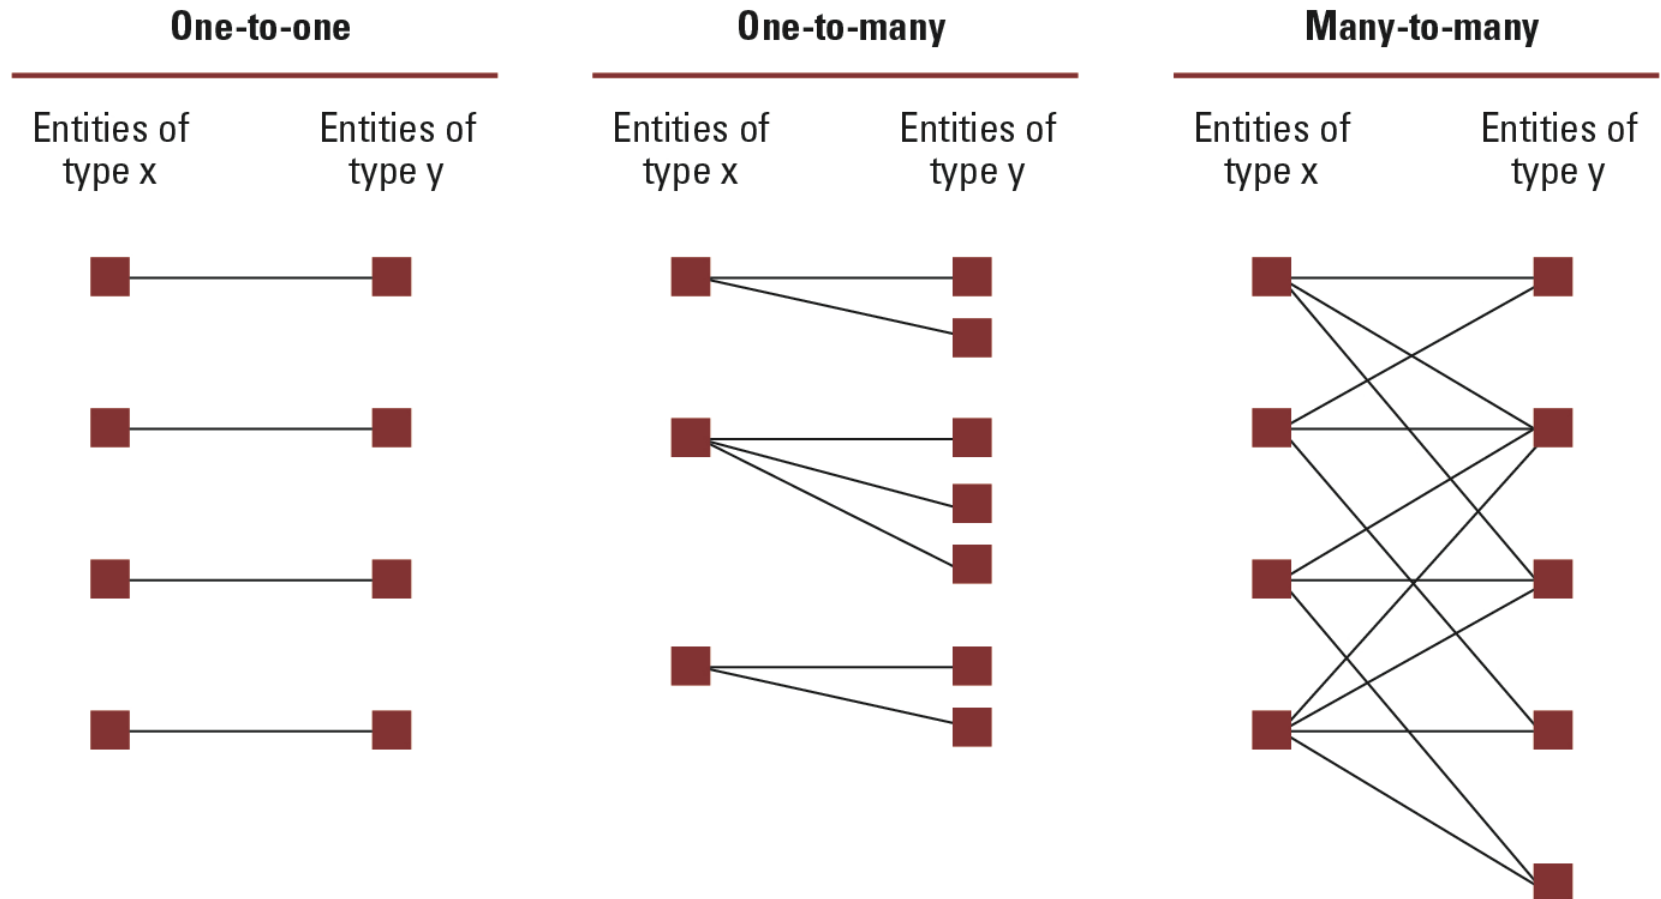

Figure 7.12 A class diagram depicting generalizations

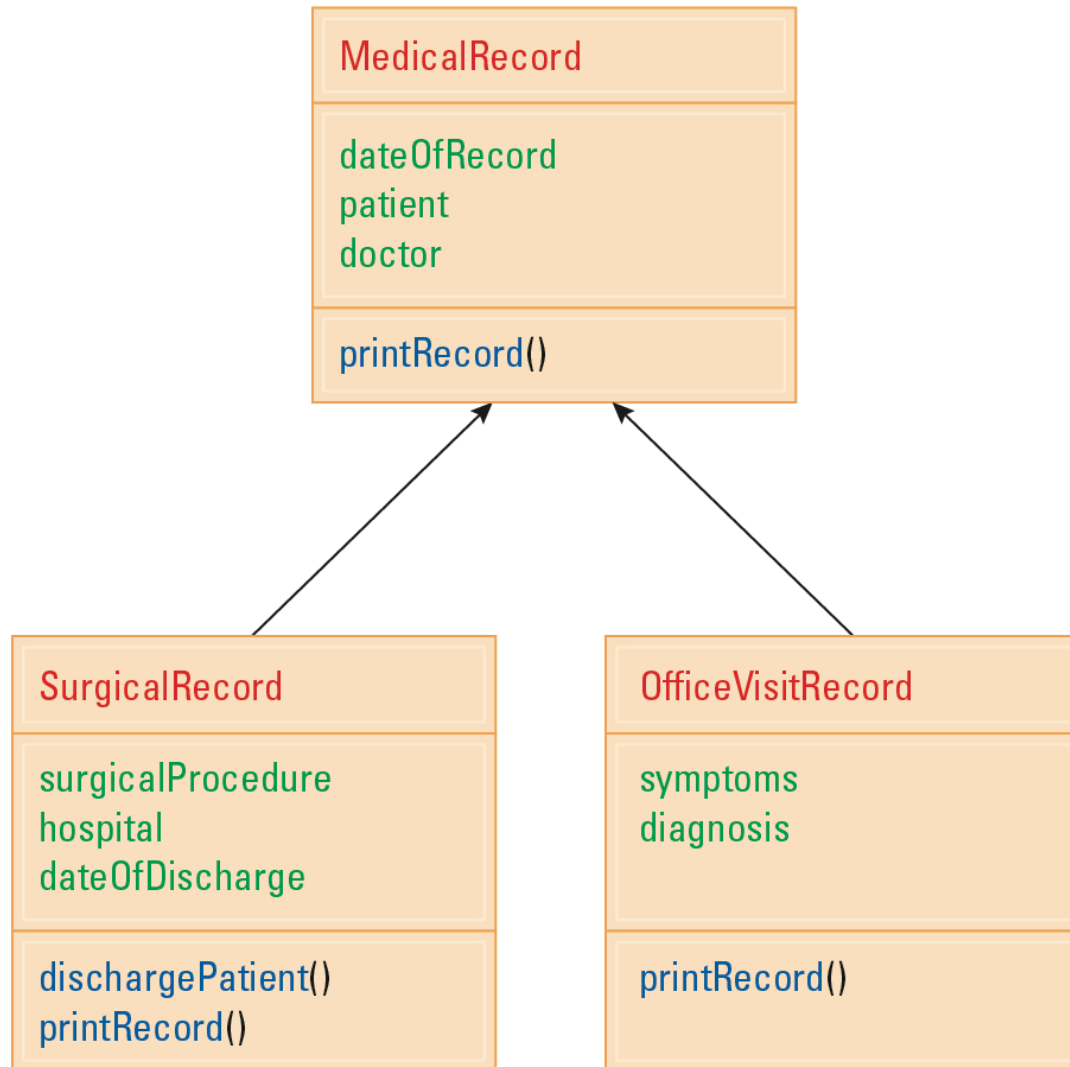

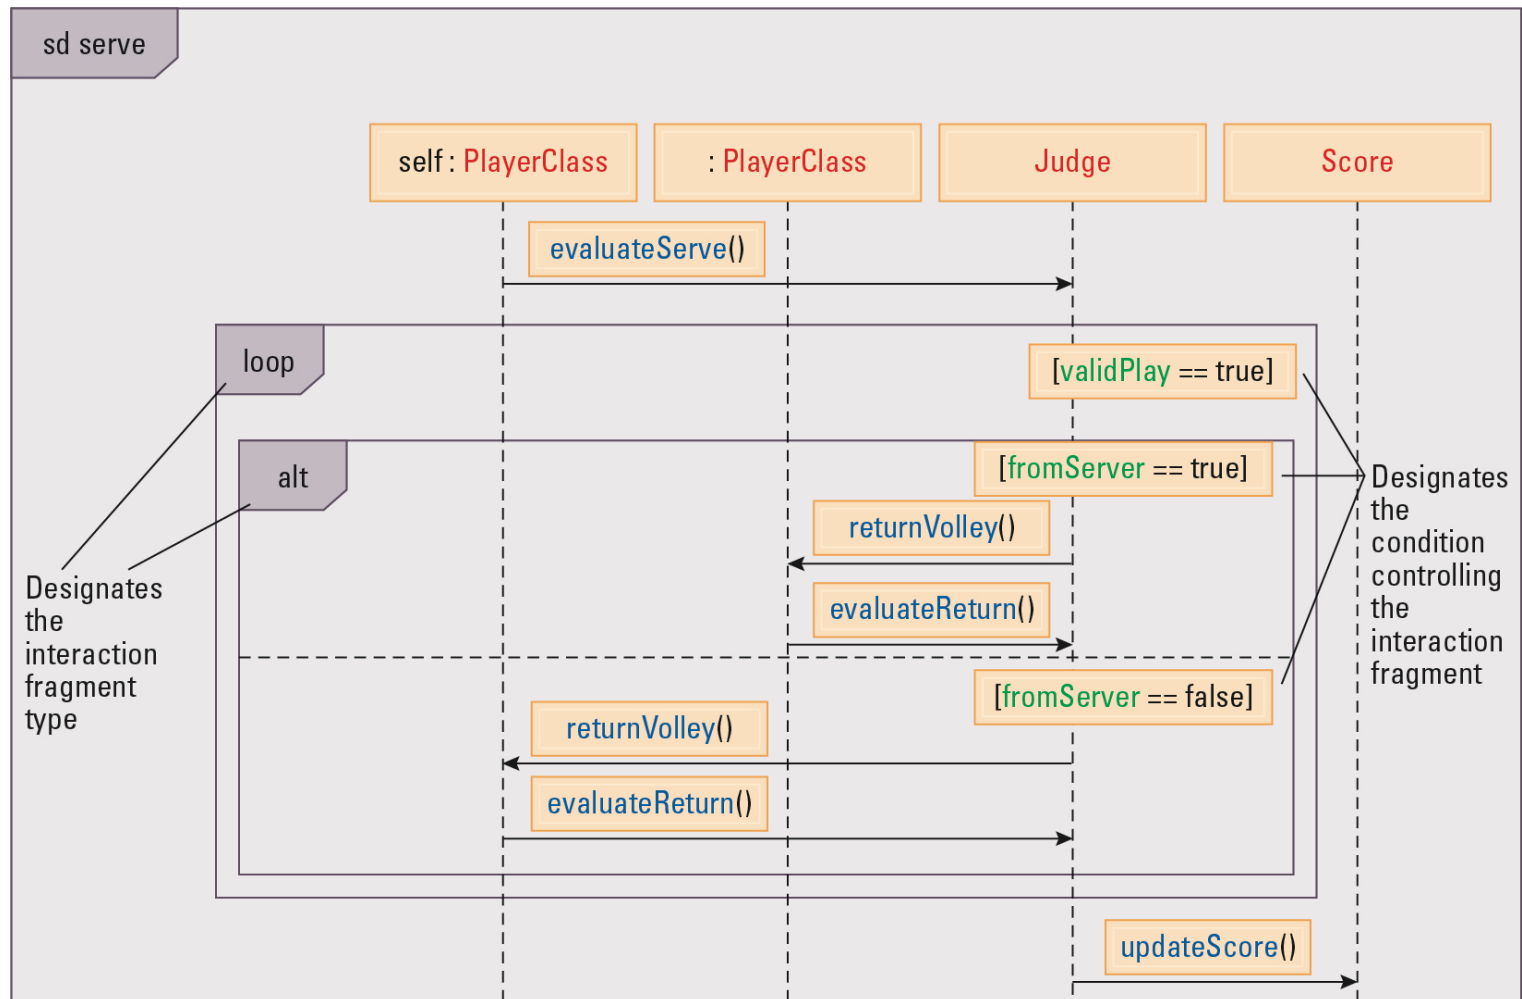

Figure 7.13 A sequence diagram depicting a generic volley

Design Patterns

- Well designed “templates” for solving recurring problems
- Examples:
 - Adapter pattern: Used to adapter a module’s interface to current needs
 - Decorator pattern: Used to control the complexity involved when many different combinations of the same activities are required
- Inspired by the work of Christopher Alexander in architecture

Simulating a System

- Structured Walkthroughs
- Each member of the design team is given a CRC card (Class-responsibility-collaboration)
- “Theatrical” experiment – role playing

7.6 Quality Assurance

- Glass-box testing
 - Pareto principle
 - Basis path testing
- Black-box testing
 - Boundary value analysis
 - Redundancy testing
 - Beta testing

7.7 Documentation

- User Documentation
 - Printed book for all customers
 - On-line help modules
- System Documentation
 - Source code
 - Design documents
- Technical Documentation
 - For installing, customizing, updating, etc.

7.8 The Human-Machine Interface

- Idea that a software system is a tool which is designed for the convenience of the human using it
- Ergonomics – physical abilities of humans
- Cognetics – mental abilities of humans
 - Habits
 - Attention

7.9 Software Ownership and Liability

- Copyright
 - Allow a product to be released while retaining ownership of intellectual property
 - Asserted in all works:
 - Specifications
 - Source code
 - Final product

Intellectual Property

- Software License
 - A legal agreement that grants the user certain permissions without transferring ownership
- Patents
 - Must demonstrate that it is new, usable, and not obvious to others with similar backgrounds
 - Process is expensive and time-consuming
